Our interior safety grids are ideal for maximum fall protection. They can be in place during construction, even before roofing is complete and well before skylights are finally installed. By being installed below the skylight, they are protected from the weather and other exterior corrosion. The interior screens also remain in place, providing protection during maintenance, skylight replacement, and other roof repairs.

Both options, ELITE and SENTRY, virtually disappear from interior view when backlit by the skylight above. The ELITE is thinner than the SENTRY, thus is engulfed by light more completely.

Safety Grids are installed on the top of the structural curb in the daylight opening which allows for retrofit installations as well as new construction. Fasteners to be installed on top face of the perimeter with recommended spacing of 6" on center. **Fasteners provided by other.**

ELITE Safety Grid

Composed of aircraft grade aluminum frame, laced with galvanized steel 1/8" cable. A simple solution to providing worker fall protection without compromising interior design.

SENTRY Safety Grid

Composed of aircraft grade aluminum frame and 1/4" steel woven grid. This fall protection grid also provides resistance against burglar break ins.

QTY	Safety Grid TYPE		Daylight Opening Dimension		Dealer Cost
			width (in.)	height (in.)	
A	<input type="checkbox"/> ELITE	<input type="checkbox"/> SENTRY			
B	<input type="checkbox"/> ELITE	<input type="checkbox"/> SENTRY			
C	<input type="checkbox"/> ELITE	<input type="checkbox"/> SENTRY			
D	<input type="checkbox"/> ELITE	<input type="checkbox"/> SENTRY			
E	<input type="checkbox"/> ELITE	<input type="checkbox"/> SENTRY			
F	<input type="checkbox"/> ELITE	<input type="checkbox"/> SENTRY			

All Safety Grids are custom orders and can not be returned for credit.
